

ANGIOSPERMIC FLORA OF PACHALUR HILLS IN DINDIGUL DISTRICT OF TAMILNADU, INDIA - A CHECKLIST

S. SHANMUGAM, P. SELVAKUMAR, S. MOHAN, G. DINESH KUMAR and K. RAJENDRAN

Post Graduate and Research Department of Botany, Thiagarajar College (Autonomous), Madurai - 625 009. Tamilnadu, India.

E-mail: shanmugam_botany@yahoo.com

The present study includes the enumeration of angiospermic flora of Pachalur hills of Dindigul district, was undertaken for a period of 12 months from June 2007 to May 2008. The study included cultivated, introduced and indigenous plants. The vegetation types in the forest area of Pachalur vary from scrub jungle to semi - evergreen forest in the valleys provided with water resources. Totally 429 species belonging to 325 genera distributed among 104 families were recorded. Dicotyledons were represented by 350 species of 270 genera belonging to 89 families. Monocotyledons were 79 species of 55 genera belonging to 15 families. Among dicotyledons, the family Rubiaceae (21 species) was the most dominant family followed by Fabaceae and Euphorbiaceae (each of 18 species). In the case of monocotyledons, Poaceae (27 species) was the dominant one followed by the family Cyperaceae (12 species). Among the 104 families listed 40 families were represented by a single genus and a single species. The herbs (160 species) were found to be more in number than trees (116 species) followed by shrubs (101 species) and climbers (52 species). Most of the plants recorded in the present study were economically important and were used for various purposes by local people and tribals like Paliyars living in the study area, Pachalur.

Keywords : Angiospermic flora; Pachalur hills; Tamilnadu; India.

Introduction

The comprehensive studies of the plants growing in a particular area are known as flora. A flora may cover any suitable area from a small patch of forest to a Taluk, City, District, State, Country or even a Continent. Floristic studies may be a simple complied check list or an elaborate analysis of the taxa of that area.

As with other parts of India, plants have been studied in Tamil Nadu from ancient times mainly from medicinal, agricultural, ritualistic and other utilitarian points of view. Several botanists have studied the flora of Tamilnadu and have been able to discover many taxa new to science and also several new records. A Handbook on some South Indian weeds was prepared by Tadulingam and Venkatanarayana¹. Flora of Presidency of Madras was published by Gamble and Fischer². Some considerations on the succession of vegetation around Kodaikanal were published by Meher-Homji³. Flora of Tamilnadu Carnatic was also carried out⁴. Nair and Henry published the Flora of Tamilnadu⁵. Henry *et al.*, published the second and third volume of Flora of Tamilnadu⁶⁻⁷.

Subramanyam and Henry made a preliminary

survey of the flora of Alagar hills, Karandamalais and surrounding regions in Madurai District⁸. Krishnan and Sri Ganesan prepared a supplementary list of plants of Alagar hills⁹. Selvaraj studied the floristic study of Thiruparkundram and its surroundings¹⁰. Flora of Alagar hill was carried out in detail by Sri Ganesan¹¹.

Mallaiyarakkar carried out the studies on variations in the flora of cardamom hills in relation to altitude¹². The floristic work of the polypetalous members of Karandaimalai hills was taken up by Muthurakku¹³. Mathusuthanan worked only on gamopetalous dicotyledons of Karandaimalai hills¹⁴. Beside these, many energetic botanists have worked on the flora of various districts and regions of India¹⁵⁻³⁴.

The investigation about the floristic composition will definitely be useful in the utilization of information by non-taxonomists like, ecological consultant, environmental engineers, forest managers, silviculturists, farmers, real estate appraisers, agricultural consultants, landscape architects, plant breeders, plant pathologists, toxicologists, forensic scientists, elementary teachers and others. Having the above facts in mind, an attempt was

made to study the detailed floristic analysis of Pachalur hills in Dindigul district of Tamilnadu, India.

Material and Methods

The area of investigation, Pachalur is lies between $10^{\circ} 21' 46''$ N latitude and $77^{\circ} 39' 50''$ E longitude. The elevation of the study area ranges from 1000 - 1500 M above Mean Sea Level. The temperature ranges from 12°C during winter and about 25°C during summer. The study site received the annual rainfall of about 800 - 1000 mm. The floristic divisions of the Pachalur forests are the semi-evergreen low-level sholas in the ravine and valleys, the Savannah type, the dry deciduous fuel forests and deciduous thorn forest. The soil has a good content of loamy soil. In higher elevations the soil comprises of about one foot fertile peaty earth with rich humus content. In some places the soil is not fertile and is just barren exposed to heavy soil erosion.

A Comprehensive and exhaustive study of plants in the hilly regions surrounding the Pachalur was undertaken for a period of 12 months from June 2007 to May 2008. The known and familiar were recorded on the spot in the collection site itself. The unknown and doubtful plants were collected and brought to the laboratory for identification. The nomenclature of the plants was identified with the help of the regional floras like Flora of Presidency of Madras (I - III Vols.)², Flora of Tamilnadu Carnatic⁴, Flora of Tamilnadu (Vol. I)⁵, Flora of Tamilnadu (Vol. II)⁶ and (Vol. III)⁷ and An Excursion Flora of Central Tamilnadu, India²⁶.

Results and Discussion

In present study investigation the various species collected were identified with the help of the sources mentioned in the methodology. Among the habits of the plants recorded, prostrate herb and creeping herb were included in the category of Herb, small shrub, sub-shrub, climbing shrub and large shrub were in the category of Shrub, creeper, liner, vine, twiner and straggler were in the category of Climber and small trees were included in Trees.

Totally 429 species belonging to 325 genera distributed among 104 families were recorded. A complete floristic list is presented in the Table 1.

Among 429 species recorded from the study area, dicotyledons were represented by 350 species of 270 genera belonging to 89 families (Table 1,2) and monocotyledons were 79 species of 55 genera belonging to 15 families (Table 1,3). Among the class dicotyledons, 151 species belonging to 119 genera distributed among 50 families were grounded under polypetalae, 141 species belonging to 112 genera distributed among 21 families under gamopetalae, and the remaining 58 species of 39

genera belonging to 18 families were monochlamydeae (Table 4).

Among the 104 families listed 40 families (37 families of dicots and 3 of monocots) were represented by a single genus and single species, 20 families (17 of dicots and 3 of monocots) by 2 species, 10 families (9 of dicots and 1 of monocots) by 3 species, 5 families (1 of dicots and 4 of monocots) by 4 species, 5 families (4 of dicots and 1 of monocots) by 5 species, 2 families (both are dicots) by 6 species, 4 families (3 of dicots and 1 of monocots) by 7 species, 4 families (all are dicots) by 8 species, 1 family of dicots (Apocynaceae) by 10 species, 2 families of dicots by 11 species, 2 families (1 of dicots and 1 of monocots) by 12 species, 2 families (both are dicots) by 14 species, 2 families of 16 species, 2 families of dicots by 18 species, 1 family of dicots (Rubiaceae) by 21 species and 1 family of monocots (Poaceae) were represented by 27 species (Table 2, 3).

Among dicotyledons, Rubiaceae was found to be dominant and largest family comprising 21 species among 15 genera. Fabaceae and Euphorbiaceae shared the second largest family status equally; both of them were represented by 18 species and considered to be co-dominant families. The third largest families was Acanthaceae and Solanaceae, both were represented by 16 species followed by Asteraceae and Lamiaceae each of (14 species) (Table 3). Among these *Solanum* of Solanaceae was represented by 7 species which was found to be the dominant genus. The genera *Hibiscus* of Malvaceae and *Citrus* of Rutaceae (both of them are represented by 5 species each) were recorded as co-dominant genera (Table 1).

In the case of monocotyledons, Poaceae was found to be dominant family comprising 27 species belonging to 17 genera. Cyperaceae (12 species among 5 genera) was recorded as co-dominant family. *Cyperus* of Cyperaceae and *Eragrostis* of Poaceae equally shared the dominant genera status, both of them were represented by 5 species. The genus *Kyllinga* of Cyperaceae was represented by 3 species which was found to be the co-dominant genus.

The herbs (160 species) were found to be more in number than shrubs (116 species) followed by trees (101 species) and climbers (52 species). In the case of dicotyledons, among 350 species recorded 107 species were found to be herbs, 92 species were found to be trees, 104 species were shrubs and 47 species were climbers (Fig 1). In the case of monocotyledons, among 79 species recorded 53 species were found to be herbs, 12 species (*Curcuma longa*, *Elettaria cardamomum*, *Hedychium*

Table 1. List of plant species with their Family, Habit and Local name recorded in the study area - Pachalur.

S. No.	Family	Botanical name	Habit	Local name
1	Acanthaceae	<i>Adhatoda vasica</i> Nees	Shrub	Adaathodai
2	Acanthaceae	<i>Andrographis echooides</i> (L.) Nees	Herb	Koburandhaangi
3	Acanthaceae	<i>Andrographis paniculata</i> (Burm.f.) Wallich ex Nees	Herb	Siriyaanangai
4	Acanthaceae	<i>Asystasia crispata</i> Benth.	Shrub	Upputhali
5	Acanthaceae	<i>Asystasia dalzelliana</i> Santapau	Shrub	Vellaithalai
6	Acanthaceae	<i>Asystasia gangetica</i> (L.) T. Anderson	Shrub	Meddaykeerai
7	Acanthaceae	<i>Barleria acuminata</i> Nees	Shrub	Shemmuli
8	Acanthaceae	<i>Barleria buxifolia</i> L.	Shrub	December Poo
9	Acanthaceae	<i>Barleria longiflora</i> L. f.	Shrub	Peru Shemmuli
10	Acanthaceae	<i>Barleria tomentosa</i> Roth.	Shrub	Sirushemmuli
11	Acanthaceae	<i>Blepharis maderaspatensis</i> (L.) Roth	Herb	Karattukkodi
12	Acanthaceae	<i>Peristrophe montana</i> Nees	Herb	Seedhevi
13	Acanthaceae	<i>Rhinacanthus nasutus</i> (L.) Kurz	Shrub	Naagamalli
14	Acanthaceae	<i>Rungia repens</i> (L.) Nees	Herb	Kudagam
15	Acanthaceae	<i>Stenosiphonium confertum</i> Nees	Herb	Azhagarmalaikurunji
16	Acanthaceae	<i>Thunbergia fragrans</i> Roxb.	Climber	Yindhirapushpam
17	Agavaceae	<i>Agave americana</i> L.	Shrub	Yaanaikkatralai
18	Agavaceae	<i>Agave angustifolia</i> Haw.	Shrub	Kallkathaalai
19	Agavaceae	<i>Sansevieria roxburghiana</i> Schultes f.	Shrub	Marul
20	Aizoaceae	<i>Mollugo cerviana</i> L.	Herb	Parpaadagam
21	Aizoaceae	<i>Mollugo nudicaulis</i> Lam.	Herb	Parpaadagappullu
22	Aizoaceae	<i>Mollugo pentaphylla</i> L.	Herb	Parpaadagam
23	Alangiaceae	<i>Alangium salviifolium</i> (L. f.) Wangerin	Tree	Alingil
24	Amaranthaceae	<i>Achyranthes aspera</i> L.	Herb	Naayuruvi
25	Amaranthaceae	<i>Achyranthes bidentata</i> Blume	Herb	Malainaayuruvi
26	Amaranthaceae	<i>Aerva lanata</i> (L.) Juss.	Herb	Sirukanpeelai
27	Amaranthaceae	<i>Aerva tomentosa</i> Forsskal	Herb	Kooraipo
28	Amaranthaceae	<i>Amaranthus spinosus</i> L.	Herb	Mullikkeerai
29	Amaranthaceae	<i>Celosia cristata</i> (L.) Kuntze	Shrub	Kozhikkondai
30	Amaranthaceae	<i>Gomphrena globosa</i> L.	Herb	Sudukattumalli
31	Amaranthaceae	<i>Pupalia atropurpurea</i> (Lam.) Moq.	Herb	Sunnaambukkeerai
32	Amaryllidaceae	<i>Crinum asiaticum</i> L.	Shrub	Vishamoongil
33	Amaryllidaceae	<i>Crinum latifolium</i> L.	Shrub	Vishamoongil
34	Anacardiaceae	<i>Mangifera indica</i> L.	Tree	Maamaram
35	Annonaceae	<i>Annona cherimola</i> Miller	Tree	Malaicheethaa
36	Apiaceae	<i>Centella asiatica</i> (L.) Urban	Herb	Vallaarai
37	Apiaceae	<i>Cuminum cyminum</i> L.	Herb	Seeragam
38	Apocynaceae	<i>Alstonia scholaris</i> (L.) R.Br.	Tree	Veppaalai
39	Apocynaceae	<i>Carissa carandas</i> L.	Shrub	Kalaakkai
40	Apocynaceae	<i>Holarrhena pubescens</i> Wallich ex A. DC.	Tree	Kudagappaalai
41	Apocynaceae	<i>Ichnocarpus frutescens</i> (L.) R.Br.	Shrub	Paravalli
42	Apocynaceae	<i>Nerium odoratum</i> Sol.	Shrub	Arali
43	Apocynaceae	<i>Plumeria alba</i> L.	Tree	Perumaal arali
44	Apocynaceae	<i>Plumeria rubra</i> L.	Tree	Yeelathalari
45	Apocynaceae	<i>Thevetia peruviana</i> (Pers.) Merr.	Shrub	Thangarali

13	Orchidaceae	3	4
14	Poaceae	17	27
15	Zingiberaceae	4	4

Table 4. Different taxon and their corresponding number of families, genera and species recorded in the study area - Pachalur.

S. No.	Taxon		Number of families	Number of genera	Number of species
	Class	Subclass			
1	Dicotyledons	Polypetalae	50	119	151
		Gamopetalae	21	112	141
		Monochlamydeae	18	39	58
	Monocotyledons	-	15	55	79
	Total		104	325	429

**Fig. 1.** Number of Herb, Shrub, Tree and Climber species recorded in the area of investigation - Pachalur.

coronarium, *Canna indica*, *Crinum asiaticum*, *Crinum latifolium*, *Agave Americana*, *Agave angustifolia*, *Clocasia esculenta*, *Sansevieria roxburghiana*, *Alocasia indica*, *Alocasia indica*) were shrubs, 9 species (*Musa paradisiaca*, *Areca catechu*, *Borassus flabellifer*, *Caryota urens*, *Cocos nucifera*, *Corypha umbraculifera*, *Phoenix loureirii*, *Phoenix sylvestris*, *Bambusa arundinacea*) were trees and 5 species (*Dioscorea alata*, *Dioscorea oppositifolia*, *Asparagus racemosus*, *Gloriosa superba*, *Smilax zeylanica*) were climbers (Fig 1).

In the study area parasites were uncommon. *Cuscuta reflexa* Roxb., of Convolvulaceae is found to be a leafless stem parasite, parasitic over *Morinda tinctoria* Roxb. and *Pavetta indica* L. of Rubiaceae. *Oberonia iridifolia* (Roxb.) Lindley, and *Vanda spathulata* (L.) Sprengel of Orchidaceae are the epiphytic plants commonly presented in the study area. They were found with velamen roots and clinging roots growing on the trunk of many large trees including *Podocarpus* (Gymnosperm). *Santalum album* L. of Santalaceae was found to be the only root parasite (only at seedling stage) found in the study area. *Viscum orientale* Willd. of Viscaceae was found to be the only stem parasite. Plants like *Nymphaea pubescens* Willd. of Nymphaeaceae, *Hydrilla verticillata* (L. f) Royle and *Nechamandra alternifolia* (Roxb.) Thwaites of Hydrocharitaceae are the aquatic plants found in ponds. Most of the plants recorded in the present study were economically important and were used for various purposes by local people and tribals like Paliyars living in the study area, Pachalur.
